

From Manual Exports to Automated Workflows

Connecting Smartsheet EU to Zapier without custom development.

CanSolvelt® is a Swiss-Ukrainian consulting company with 13+ years in business process transformation. We implement Smartsheet, build custom integrations, and bridge the gaps where standard connectors don't exist.

The Problem

No native connection

Smartsheet EU environments don't connect to standard Zapier out of the box

Manual workarounds

Teams fall back on CSV exports, copy-paste, and repeated file uploads across systems

Delayed reporting

Reports depend on manually refreshed data instead of real-time or scheduled sync

Scale risk

Processes that work at low volume break as data volume and project count grows

Smartsheet EU - Zapier Connector

Connects Smartsheet EU accounts directly to Zapier - no custom code required for each use case

Smartsheet EU acts as a live data source inside any Zapier workflow

Available free of charge; requires internal ownership and validation on the client side

Use Cases. Enterprise-Wide Impact

Sales

Before: Manual input of project statuses into CRM.
After: Pipeline and project data synchronized automatically.

Procurement

Before: Copy-pasting approved line items for finance.
After: Approved rows pushed automatically to accounting systems.

Logistics

Before: Weekly email updates on deliverable status.
After: Automated shipment updates sent to communication tools.

Reporting

Before: Manual CSV downloads for weekend reconciliation.
After: BI dashboards and downstream systems auto-populated on schedule.
